

Summer Fun at Behavioral Development!

Come join us for summer fun and learning! This summer we will offer the following learning opportunities at our Wallingford location. Choose one or combine to have as much summer fun as you'd like!

Summer in the Community: This learning track will provide students with theme based activities around community locations. Students will tour through each of four community environments daily and learn vocabulary, concepts and social skills related to the setting. Each of our classrooms will be set up like the location it represents. Students will have fun with hands on projects, role playing, cooking, music, computer skills, and even dance as they move through the community. This program runs daily from 9:00-2:00 for six weeks - July 7th to August 22. Students of all ages are welcome. Activities and skills will be customized for various age groups.

Kitchen Science: Here, students will have fun learning about science while enjoying kitchen activities. Science is a wonderful vehicle for teaching predictions, problem solving and thinking skills. Skills many of our students need to develop. Students ages 12 and up would be best suited for this class. This class will run for five weeks from July 7th to August 15th from 9:00-12:00 daily.

Social Skills Groups: Social skills groups with an emphasis on social cognition will be offered throughout the summer. Groups will be specifically designed for children enrolled and topics for instruction will be identified based on completion of a parent questionnaire and brief interview. Students will be assigned based on skill levels and identified needs. Groups will run four six week sessions from July 7th to August 22nd. These classes will more than likely run in the afternoons. A progress note will be provided at the end of the six week session.

Direct Instruction: As always, students may be enrolled for the summer to receive direct instruction. This can be provided in isolation or as a supplement to any of the programs above. Direct instruction programs are designed for each individual student and thus may look very different
