

Dear Parents,

Harcourt Assessment, Inc., the leading publisher of assessment tools in the United States, is developing a new questionnaire that will, when published, give school professionals important information about how a child learns and processes information using sensory data.

Although the questionnaire is appropriate for any child, it has specific applications that apply for use with children who have been diagnosed with Asperger's Syndrome, Autism, or Attention Deficit Hyperactivity Disorder (ADHD). The results from the questionnaire will allow school professionals to design effective interventions, strategies, and Individualized Education Plans that will help manage daily classroom life.

While this assessment is in development, it is vital that parents and teachers of children ages 3 to 11 with Asperger's, Autism, or ADHD complete the questionnaires to ensure that it is a valid and reliable assessment for these children. Teachers and parents each complete a 15-20 minute questionnaire. Parents and teachers will each be compensated \$10 for completing the questionnaire.

Parents we ask that you please give this letter to your child's teacher and have them contact me Jackie Gonzalez in regards to this classroom questionnaire. Once I have received word from your teacher about participation I will then have them complete an enrollment form and will mail the questionnaires to your teacher. Which they will then contact you letting you know they have the questionnaire for you to complete. Please let me know if you have any questions or concerns.

Sincerely,

Jackie Gonzalez
